About

I am a Product Designer specializing in mobile and web interfaces, with a focus on UX, visual systems, and product strategy.

I work with user flows, problem discovery, and end-to-end interface design — from initial concepts to production-ready designs for development.

I integrate AI tools into the design process to accelerate prototyping, generate solutions, and validate hypotheses.

I focus on rapid iteration: testing solutions, validating assumptions, and continuously improving products based on user feedback and behavioral insights.

Professional Experience

ООО «Dobrograd» - Product Designer

2024 — 2026

- Developed the digital service for the resort project "Dobrograd": analyzed user scenarios for information search, service selection, and booking; optimized the product structure and interfaces to support business objectives.
- Conducted UX audits of user journeys, identified user drop-off points, and improved the product's information architecture.
- Designed user flows and landing pages for advertising campaigns, taking into account different audience segments to increase communication relevance and improve the overall user experience.
- Created landing pages and design systems for digital projects of various scales, including "Dobrograd Panorama Lounge," "Dobrograd: Wakeboarding Championship," "Russian Wakeboarding Championship (Electric Tow)," and "Pride of Great Russia."
- Designed a digital food ordering service: researched the user journey for meal selection, identified navigation and catalog structure issues, tested solutions, and improved the user flow from menu browsing to order completion.

Askona - Product Designer (E-commerce)

2021 — 2024

- Designed and optimized e-commerce user flows, including web interfaces, landing pages, and customer journeys focused on increasing purchase conversion.
- Provided design support for marketing launches and promotional campaigns (landing pages, promotional assets); increased purchase conversion by 4% based on Yandex Metrika data compared to the previous year, delivering measurable business impact for an e-commerce company.
- Developed and maintained key e-commerce experiences, including promotional landing pages and digital catalogs, ensuring consistent UX and conversion-oriented user journeys.
- Designed and scaled a design system for the Beyosa product interface.
- Created UX and visual concepts for product launches and campaigns, aligning design decisions with business objectives and conversion metrics.
- Worked with user scenarios, interface states, and edge cases within a cross-functional product team throughout the entire product development lifecycle.

Natural Health - UX/UI Designer

2020 — 2021

- Maintained and updated the corporate website during the company's transition from a network marketing model to a retail business model: adapted content, structure, and visual communication to align with new business objectives, ensuring brand consistency and information relevance throughout the transformation period.
- Developed marketing materials and digital communications for both online and offline channels.
- Created social media content and marketing campaign assets, achieving an average of 4–5K views per content piece.
- Developed the company's brand identity and visual guidelines to ensure consistent branding across all touchpoints.
- Implemented the brand identity across the product line and company communication materials.
- Created visual materials for the company's participation in the "Islamic World 2021" forum, ensuring a unified brand presentation.
